Test Log

Identifier:

Test Log Title

1. Test Log Identifier.

This Test Log shall be referred to by the following identifier:

Specify the unique identifier assigned to this Test Log.

This Test Log provides a chronological record of relevant details about the execution of tests specified in Test Design Specification:

Test Design Specification Identifier.

Additional supporting material referenced in this document must accompany it. The particular log format used here combines specific FedEx test scheduling requirements with industry test logging standards. This document conforms to ANSI/IEEE Std 829-1983, Standard for Software Test Documentation.

2. Description.

Information which applies to all entries in the log except as specifically noted in a log entry should be included here. The following information should be considered.

(1) Identify the items being tested including their version/revision levels. For each of these items, supply a reference to its transmittal report, if it exists.

(2) Identify the attributes of the environments in which the testing is conducted. Include facility identification, hardware being used (for example, amount of memory being used, CPU model number, and number and model of tape drives, and/or mass storage devices), system software used, and resources available such as the amount of memory available.
